PriMus REVOLUTION

Bills Of Quantities And Works Accounting

PriMus is the most widely used, appreciated, and imitated program for managing bills of quantities. With a WYSIWYG interface, multi-platform applications, integrated data management, object technology, and new solutions for interoperability and sharing, it is the standard for all.

WYSIWYG Interface

PriMus Revolution, thanks to its WYSIWYG (what you see is what you get) interface, allows users to work as easily as on a sheet of paper or form, inserting descriptions and measurements. Quantities, Price Lists and Work Progress Statements are different views for a single, compact file; for every change, all views are automatically updated and aligned. General data, structure (chapters, categories, etc.), forms, and documents already printed or yet to be printed are linked to the document, which users can display, consult, and change at any time.

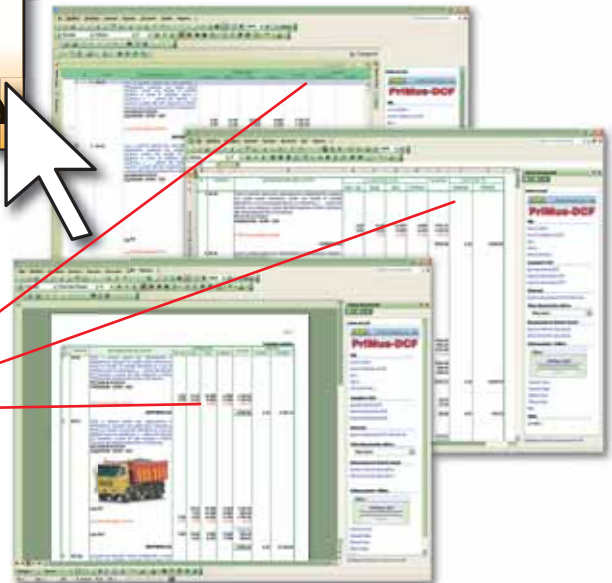

Price books in quantities with Drag and Drop

The display is a virtual desk on which the user can open price lists, quantities, surveys and measurement books to view, insert, modify, or copy data from one place to another with simple Drag and Drop operations. Each file is virtually identical to the corresponding hardcopy. With PriMus Revolution, users have free access to a vast database of price books for regions, chambers of commerce and private publishers. Price lists can be opened directly over the Internet and available data can be copied via Drag and Drop. The PW-CONV technology, moreover, allows users to convert price lists to PWE, XPWE and DCF formats compatible with ACCA programs.

DCF

Computation
Format

Integration, compatibility and interoperability

Integration, compatibility and interoperability Thanks to DCF - Computation Document Format - PriMus Revolution completely solves the problem of compatibility and interchange of data between applications and processes. Bills of quantities created with PriMus Revolution can be saved in standard formats like XML, XPWE, PWE, XLS and DOC; data products are open and interchangeable with all users and any other procedure. PriMus features can be integrated with other applications. PriMus documents can be opened and edited with all-purpose programs such as Excel or Word (Office Professional 2003) or specialised ones like Edilus-RC and AutoRapidus with AutoCAD.

FEATURES OF PRIMUS REVOLUTION

- PriMus allows integrated development and processing of all documents for a project or works management, updated with the latest regulatory guidelines, with automatic preparation of:
- bill of quantities (forecast, resulting cost, variance survey, final account, work estimate, proposal request, labour incidence estimate, etc).
- measurement book;
- accounting register;
- cost summary;
- work progress statement;
- payment certificate;
- steel reinforcement bars requirements book;
- statement of account;
- authentication of blank registers;
- unit price lists;
- comparison table (for variance survey, comparison of work progress statement, comparison of multiple design assumptions or proposals, etc.).
- weekly lists of workers, equipment, and costs;
- forms (completion of works, beginning of works, suspensions, resumptions, execution, etc.).
- history management.

PRIMUS REVOLUTION EXTRAS

ACTIVE DROP

Active Drop is an exclusive function of PriMus that allows dynamic control of data with Drag and Drop operations.

OBJECT TECHNOLOGY

PriMus Revolution is the first object driven bill of quantities program: there is no longer an input phase separate from document display, but rather each document view can be used to input or edit data.

DOCUMENT PRINTING

PriMus has its own "print manager" that allows you to produce and customise all documents relating to a project. Each view can be printed, and previews can be worked on directly. You can print in RTF, PDF, HTML, ASCII, DBF and AR from ACCAreader, the electronic document standard for the construction industry.

ACQUISITION OF QUANTITIES DATA FROM DRAWING

During the measurement editing phase PriMus makes use of an integrated PriMus for CAD module, allowing dynamic interaction between forecasts and projects completed with AutoCAD LT, AutoCAD, etc.; users can transfer the dimensions or attributes of a "block" directly from the drawing to the bill of quantities, with both PriMus and the drawing program, dynamically linked, open on the display.

MERGE

The compMERGE function allows integration of different document versions changed over time; compDIFFERENCE indicates differences or changes to the document during its compilation, even by several operators.

MEASUREMENT AND LUMP SUM WORKS

PriMus manages measurement or lump sum mixed contracts and works in both planning and accounting phases.

SUPERWIZARD

The program's internal superWizard generates the accounting document, directly accessing the project drawn up with PriMus to retrieve all necessary information.

SUBQUANTITIES

With the "Subquantities" function, construction site measurements reported in the book can also be recorded with direct reference to the bill of quantities; with automatic display of percentage increases in the rates for the various Bodies of Work.

VARIANCE SURVEY WIZARD

For alignment of the current accounting, lump sum or measurement and lump sum, PriMus has a unique feature: the Variance Survey Wizard. Just indicate the new rates for bodies of work to adjust the accounting to the variance.

ADDITIONAL PRIMUS MODULE

FORMS AVAILABLE

PriMus-DCF

Creation and exchange, including online, of price lists and bills of quantities

PW-CONV

Conversion of various Databases (Price Lists, Bills of Quantities, etc.) in PWE, XPWE, and DCF formats compatible with ACCA programs

PRIMUS FOR CAD

Integration between forecasts and projects completed with AutoCAD and AutoCAD LT (versions 2000 - 2002 - 2004 - 2005 - 2006 - 2007 - 2008) or with progeCAD 2006

OTHER PROGRAMS IN THE SOLUTION

PriMus-P

Bill of Quantities and Estimate

- bill of quantities and estimate for design and management of private works
- integrated processing of: Bill of Quantities (forecast, resulting cost, variance survey, final account, etc.), Price List, Work Estimate, Proposal Request, Project forms, Comparison table (even between additional bills of quantities)
- technology and interface similar to PriMus Revolution

ADDITIONAL PRIMUS AND PRIMUS-P MODULES

PriMus-A

Worksite Requirements and Price Analysis

- creation of new prices through structured P.L. items and analyses whose price is composed of several elements
- automatic composition of Worksite Requirements by quantitative identification of elementary items (materials, human resources, machinery, etc.) needed for the project

PriMus-i

Electrical and Thermohydraulic Installations

- estimation for electrical and thermohydraulic plants
- importing of price lists in METEL format (standard format for electrical equipment producers) and ANGAISA format (standard format hydro-thermosanitary equipment producers)
